

POTENTIAL COLLABORATION OPPORTUNITIES

Have you ever wanted to analyze or publish research findings about your organization?

Data Sharing:

- We are interested in opportunities to work with you and share your findings with the larger scientific community by partnering on a research publication. SMAHRT can provide scientific analysis or work with you to create a scientific write up of data your organization may have so that it can be shared with the scientific community. We have experience with both qualitative (focus group, interview, evaluation) data and quantitative (numerical, categorical) data.
- If your organization has a specific research question we are happy to assess whether we have previous data or publications on that topic to help answer your question.

Are you interested in learning how social media impacts teen health?

Teaching Exchange:

- SMAHRT is happy to provide interactive teaching sessions on our 3 core areas of interest: Social Media, Measuring Technology Use and Misuse, and Online Safety.
- We also welcome input via teaching from community organizations on how to create and maintain best practices in our work regarding specific youth communities.

Do you know any youth who might be interested in learning more about the work SMAHRT does or clinical research in general?

Youth Ambassadors: If youth are interested in visiting SMAHRT and learning more about our work we are happy to provide opportunities for them to shadow our team.

Have you ever wanted to have a say in what issues researchers should explore when it comes to teens and their health?

Stakeholder Panel: SMAHRT is interested in putting together a stakeholder panel that would provide bi-yearly input on grants and potential projects and we would love to hear your feedback.
